

Title: Case Helsinki Region: From Landfill into Industrial Park  
Author: Jukka Salmela, Operating Manager, Helsinki Region Environmental Services Authority (HSY)

Abstract

Material and Energy efficiency are in the core of EU's Environmental policies. Target on becoming a recycling society includes enforcing National Legislation to meet the strict recycling targets for MSW and C&D waste by 2020.

In order to achieve these targets cooperation between private and public operators is required. Ämmässuo Waste Treatment Centre in Espoo is the biggest landfill area in Northern Europe. Together with City of Espoo HSY has started concept development for transforming Ämmässuo-Kulmakorpi area into resource efficient ecopark. With state of the Art infrastructure and location near the Metropolitan Area, this area offers unique possibilities for industrial Symbiosis-type process development and cooperation.
